Haptica: Live the Examined Life

The AI you depend on doesn't know you.

- They forget what you tell them. Preferences, routines, past decisions. You re-explain yourself every conversation.
- They have limited context. AIs are limited to what they can read in a single session. You have to manually remind and update them.
- They only know what you relay to them. They can't observe your life, so their insight is limited to what you think to type.

The first system of record for your life

01 Remembers every decision, conversation, and thread across your work.

02 Builds a living model of your projects, tools, commitments, and collaborators.

03 Gives your AI tools the context they need to help.

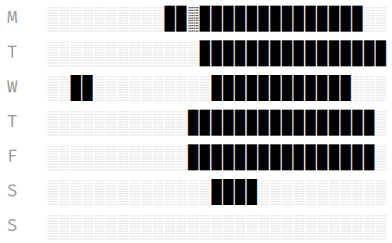
via MCP

Runs locally. Your data stays on your machine. AI tools request context with your permission.

This is one week with Haptica.

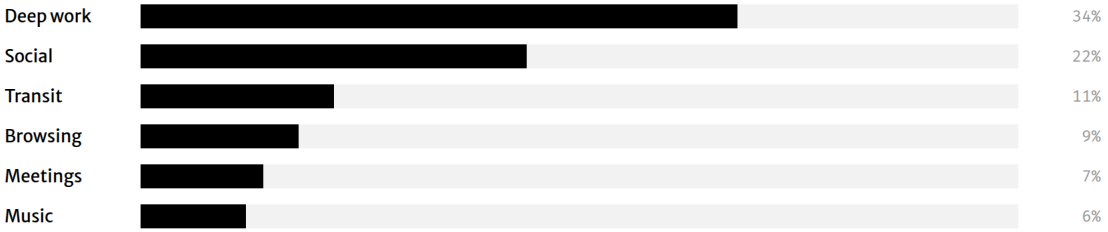
19,300 memories · 4 sources · mar 17–23

WHEN YOU'RE ALIVE



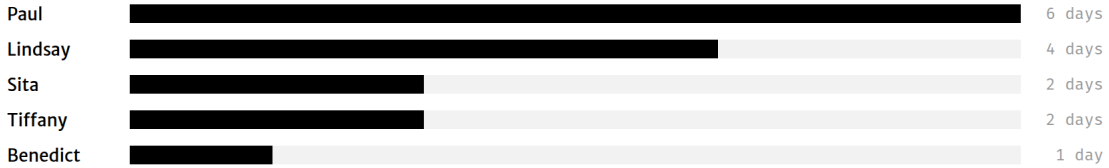
you peak at 10pm. dead before noon. every day.

HOW YOU SPEND YOUR TIME



longest focus block: 4.2h deep work · tuesday 8pm

PEOPLE — MEASURED BY VOICE, NOT CONTACTS



+2 new people this week. you talked to paul every day except wednesday.

QUOTE OF THE WEEK

"I want something that can look at my whole life."

friday, 11:32pm · alone at desk
recorder + gopro confirmed

screen 44% · voice 35% · video 19% · metadata 2%

Haptica already knows.

```
$ help me debug this

Sure, can you tell me what you're
working on, what language, and
paste the error?
```

without haptica

```
$ help me debug this

You've been working on the cross-device
alignment pipeline since Tuesday. Last
night you decided to keep Whisper+Gemini
reversible. The failing test is in
scene_claims.py:142 — same module you
refactored yesterday.

> haptica context: 4.2h session · 3 tools · 2 decisions tracked
```

with haptica

Business Model

MONTHLY SUBSCRIPTION

$49

/month · no free tier

01 Desktop screen capture + OCR

02 AI memory + chat interface

03 MCP context API for your AI tools

Context compounds.

Start with the people who feel this pain most.

WEDGE

100–500

Heavy agentic terminal users

BRIDGE

500–5,000

High-context knowledge workers

Why now

01 AI is very capable.

02 Users are delegating real work to AI agents.

03 Context is the limiting factor.

Haptica Team

Paul Han
Founder

Former datacenter hardware engineer at Meta. Nuclear weapons programs at Lawrence Livermore National Laboratory. Yale, electrical engineering and political science.

Jackie Oliver
Co-Founder

Former data engineer building production ML scoring models and pipelines for fintech credit-risk products. UVA, economics and philosophy.

Current progress

- ✓ Desktop capture agent built and running
- ✓ Processing pipeline live: OCR, chunking, structured context
- ✓ MCP server serving context to AI tools
- ✓ 5 users in closed alpha, 34 days of continuous data
- ○ Onboarding first paying users

Thank you.
